HIGHER
QUALITY

HIGH CONCENTRATION OF
VIABLE SPORES ENSURES
A RAPID CONNECTION

PRO-MIX® MYCORRHIZAL INOCULANT • POWDER

- Wettable powder formulation for transplanting into containers. Compatible with different growing media.
- Highest concentration of viable spores (6000/g, 17000/oz) ensures a rapid connection between the fungi and the root system of the plant.
- Accelerates rooting, enhances nutrient and water uptake, and improves stress resistance.

*OMRI certified in the US only

HOW TO USE

1 MIX

In a container, mix 1 part of PRO-MIX® CONNECT to 1 part of water. Water must be at a maximum temperature of 25 °C (77 °F) to avoid temperature shock.

2 STIR

Stir until the slurry is homogeneous.

3 DIP

Dip the root area of the plant into the mix. A close contact allows the mycorrhizal inoculant to quickly colonize the roots of the plant.

4 TRANSPLANT

Transplant rooted cuttings and/or plant into a PRO-MIX® growing medium.

PRODUCT STORAGE: Do not freeze or expose to temperatures above 25 °C (77 °F). Store the product at constant temperature at all times between 2°C/36°F to 20°C/68°F.

APPLICATION RATE

Container	Amount of product (g)			
	75 g (2.6 oz)	250 g (8.8 oz)	2.5 kg (88.1 oz)	
Rooted cuttings	5	15	50	500
½ gallon container	15	5	16	165
1 gallon container	30	2	8	85

** Quantity may vary depending on the cutting size

INGREDIENTS

ACTIVE INGREDIENT:

ENDOMYCORRHIZAL INOCULUM – PTB297 Technology
Glomus intraradices also known as *Rhizophagus irregularis*:
6000 viable spores/g

INERT INGREDIENTS: Kaolinite, Diatomaceous earth, Perlite and Water

HEALTHY, ENHANCED ROOT SYSTEM

BENEFITS

- Better nutrients and water uptake
- Increased stress resistance

LOOK FOR

- Root development and mass
- Robust plant
- Uniform canopy

FASTER GROWTH

- Shorter vegetative time
- Greater resistance to transplant shock

- Plant height and width
- Size of the stem
- Number of ramifications

INCREASED CROP YIELD

- Increased yield
- Healthier crop

- Flower size
- Flower density
- Overall increase in biomass

HIGHER QUALITY

- Better terpene profile
- Higher cannabinoid content

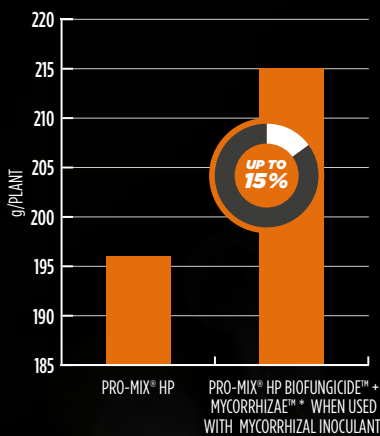

- Trichome density (frostier buds)
- Stronger aroma (smell)
- Resin level (stickiness)
- Consistency

“ I’m getting twice as much volume in the rows that we treated with the CONNECT product . ”

FACTS

10X MORE EFFICIENT WITH MYCORRHIZAE THAN ROOTS ALONE

“The absorptive area of mycorrhizal hyphae is approximately 10 times more efficient than that of root hairs and about 100 times more efficient than that of roots.”

Jones, C. E. 2009. Mycorrhizal fungi - powerhouse of the soil. Evergreen Farming 8:4-5

WITHOUT MYCORRHIZAE

WITH MYCORRHIZAE

HOW DOES IT WORK?

PRE-SYMBIOTIC PHASE

SYMBIOTIC PHASE

1 THE CALL

4 THE COMPLETION

2 THE CONTACT

3 THE CONNECTION

Mycorrhizae are beneficial associations between mycorrhizal fungi and roots. This is how the magic happens:

- 1 Making **THE CALL** between each other, the results being the spores germinating in the right direction, and the roots preparing themselves for the hyphae's arrival.
- 2 The hyphae will make **THE CONTACT** with the root surface and make their way inside the root cells.
- 3 **THE CONNECTION** between the fungi and the plant is established when arbuscules are formed inside root cells and fungi prepare to develop the underground network.
- 4 **THE COMPLETION** allows mycorrhizae to produce a secondary root network of filaments that will explore the soil and access more nutrients and water, and transfer them to the plant, leading to the renowned effects of mycorrhizae for cannabis plants.
